ADD MODEL (
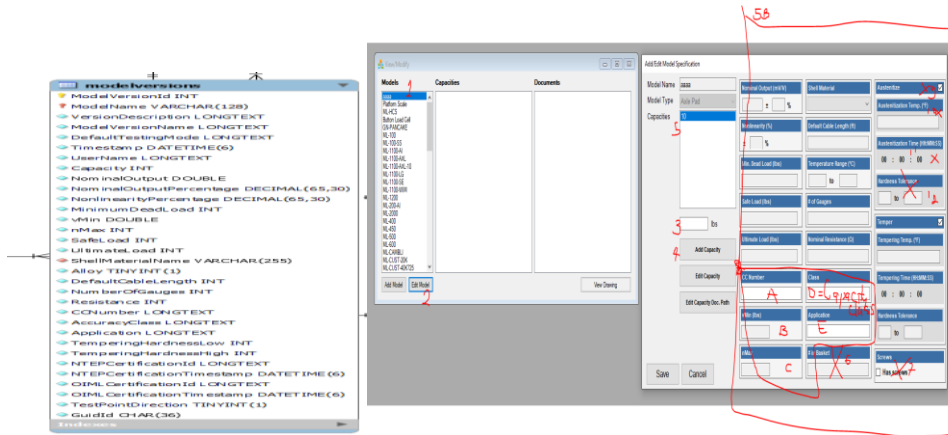

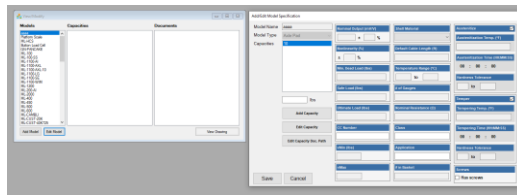

1Select a ModelType,

2 Type a model name in

3, click add model) finished

ADD CAPACITY (which is ADD Model Now Model Version

1 Select Model   2. Click Edit   3. Add Capacity in pounds 4.Cllick Add capacity 5.Select the capacity , then

5B pops out , fill these and click save

To adapt now to current massfussion 2.0

ModelVersion == Add Capacity and we don't add several capacity for a therefore we will just create a new version with the definition below but the crossed out ccomun are no longer present as we can see from 8,

Additionally, the 5 specification items that we wanted to label are: title ➔ "NTEP

- CC Number   vMin   nMax   Class   Application

- ADD TestPoints(these are weights
